City of Townsend Water Notice

The City of Townsend's water sample test results from the week of November 2, 2026, indicate the presence of total coliform. It is therefore necessary to chlorinate the Water System for the next week (approximately November 10 through November 20) to eliminate the coliform. This process will also include flushing the system.

Your city water is still safe to consume, and the City's rapid response will keep it that way.

Please contact City of Townsend's City Hall with any questions or concerns.
